Santa Coloma de Cervelló initially approves the ordinance regulating photovoltaic installations

20/03/2022

The new local regulation will encourage the installation of photovoltaic solar panels and their integration into the urban landscape

The City Council of Santa Coloma de Cervelló will approve the municipal regulatory order of photovoltaic solar installations, [published on March 10](#) [1]. The text, written in collaboration with ERF, considers both the common parameters (for example, the location of the installations in flat or inclined covers) and questions related to the typology of the building (whether they are single-family, multi-family or industrial buildings), among others).

After its initial approval, the order will be in comment period until April 25.
